Prepayments

VanS 5.0 permits entry of prepayments for Own Authority (M/S) orders through the Cash Receipts program. Prepayments are identified by order, invoice, date, amount, and a unique A/R code. Prepayments automatically create 'revenue' lines with no general ledger account number so that they can appear on invoices. Reconciliation of existing prepayments occurs automatically as part of the Invoice Print & Update cycle.

Menu Access

Do you have the need to control menu access for users? Using the Menu Access List from the System Utilities Menu will allow you to define what options an operator can and cannot access from their menu. Before running the program, you must know the account name (the first 5 characters of the login). You may also define a default printer to be assigned to this account.

Using Laser Printers with VanS

Prior to investing in a new a laser printer for use of report and/or forms printing from the VanS Software, please make sure they support PCL (Printer Control Language). If the printer costs less than \$100 it's not likely to have the necessary printer characteristics to support printing in VanS.

For questions and/or assistance on any of this information, please contact the Compusource Helpdesk.
